Unsuccessful search -> attributed jug report -> navigation

1 Before delivery

agent_2: no agent_0-attributed report for bed_9 in the pre-update state.

2 New attributed report

Turn 5: agent_0 -> agent_2.

agent_2, please get jug_3 from bed_9 and put it on table_13. I'm getting book_0.

3 Next actual action

Turn 6: Navigate[bed_9].

Navigation feedback: succeeded.

Final shared goals: 2/3 (not the immediate navigation result).

One illustrative trace; not a causal ablation. The message may also appear in the native observation channel.
