Counterexample: recorded belief versus fused final answer

1 Observed task sequence

Elizabeth searches kitchen containers and then approaches a living-room cabinet while seeking a wine glass.

2 Actual intermediate code

Generated social code records an inside-cabinet belief.

The fused historical answer nevertheless selects the opposite option.

3 Saved prediction

Direct: A (correct).

SSC final: B (wrong).

Useful for showing that intermediate records do not guarantee a correct final answer.

Post-hoc historical example. Query/options, deterministic rules and answer-conditioned scoring are part of this protocol.
