Container inspection and a recorded belief change

1 Observed task sequence

Robert opens and closes the third kitchen cabinet while looking for a dish bowl.

2 Actual intermediate code

Generated records include an earlier inside belief and a later not-inside belief.

The final answer also uses deterministic inspection evidence and an option-conditioned posterior.

3 Saved prediction

Direct: A (wrong).

SSC: B (correct).

This is a historical pipeline example, not an option-blind update experiment.

Post-hoc historical example. Query/options, deterministic rules and answer-conditioned scoring are part of this protocol.
